Professional Summary

MERN Stack Developer with 3.8 years of experience building scalable web applications using React, TypeScript, Node.js, and MongoDB. Strong in Redux Toolkit, secure REST APIs (JWT), and performance optimization. Hands-on experience with Docker for local development, Jest testing, and real-time features using WebSockets.

Technical Skills

Frontend Development: React.js, TypeScript, JavaScript (ES6+), Next.js, HTML5, CSS3, Responsive Design

State Management & Routing: Redux Toolkit, Context API, React Router, React Hooks

UI Frameworks: Tailwind CSS, Chakra UI, Shadcn UI, Ionic 8, ARIA, WCAG Guidelines, Semantic HTML

Backend Development: Node.js, Express.js, RESTful API Design, GraphQL, WebSockets, Real-time Features

Authentication & Security: JWT, OAuth, RBAC, Data Encryption, Request Validation, Error Handling

Databases: MongoDB, PostgreSQL, Redis, SQL (Aggregation, Indexing, Query Optimization)

DevOps & Containerization: Docker, Kubernetes (Pods, Services, Deployments), Ansible, CI/CD Pipelines

Testing: Jest, React Testing Library, Unit Testing, Integration Testing (70% coverage)

AI Integration: Gemini API Integration, AI Chatbot Development, Prompt Engineering

Tools & Version Control: Git, GitHub, Bitbucket, Postman, npm/yarn

Methodologies: Agile/Scrum, Code Reviews, Performance Optimization

Professional Experience

Software Engineer (MERN Stack)

January 2023 – Present

RCS Tech

Bangalore, India

- Architected and developed enterprise procurement and asset management application using React.js, TypeScript, Node.js, and MongoDB, improving operational efficiency by 30%
- Built responsive, accessible UIs with Tailwind CSS and Shadcn UI following WCAG guidelines and ARIA standards
- Implemented Redux Toolkit for centralized state management across 50+ components, reducing state-related bugs by 40%
- Designed and developed secure RESTful APIs with JWT authentication, RBAC, request validation, and centralized error handling for multi-tenant architecture
- Optimized frontend performance using code splitting, lazy loading, and React optimization techniques, reducing page load times by 25% and improving Core Web Vitals
- Integrated AI-powered chatbot using Gemini APIs for asset queries, reducing support tickets by 20% through secure key management and intelligent fallbacks
- Implemented real-time features using WebSockets for live asset tracking and instant notifications
- Optimized MongoDB database performance through aggregation pipelines and indexing, achieving 40% faster data retrieval
- Established comprehensive testing framework with Jest and React Testing Library, achieving 70% code coverage and reducing production bugs by 30%

Software Development Engineer

February 2022 – October 2022

Kora Systems

Goa, India

- Developed responsive e-commerce platform using React.js, TypeScript, Node.js, MongoDB, and Chakra UI with reusable component architecture
- Implemented RESTful APIs for product catalog, inventory management, and order processing with JWT authentication and data encryption
- Created interactive, accessible UI components with optimized rendering and React Router for seamless navigation, boosting user engagement
- Designed optimized MongoDB schemas with aggregation pipelines and indexing for efficient product catalog management
- Implemented Redux Toolkit for global state management across shopping cart, user sessions, and inventory updates

Key Projects

Traxx v12 – Enterprise Asset Management | React, TypeScript, Node.js, MongoDB, Docker

2023 – Present

- Built real-time asset tracking system with automated maintenance scheduling using React.js, Redux Toolkit, and WebSockets
- Integrated AI chatbot module using Gemini APIs for natural language asset queries, reducing manual lookup time by 40%
- Designed scalable RESTful APIs with JWT authentication and RBAC for multi-role access control

Project-Hub – AI-Enhanced Project Management <i>React, TypeScript, Redux, Node.js, MongoDB</i>	2024 – 2025
• Built modular dashboard with analytics visualizations using React.js, TypeScript, and Redux Toolkit for state management • Introduced AI-assisted project summary generation using Gemini APIs • Implemented secure JWT authentication with password reset, email verification, and request validation	
Rentity – E-commerce Rental Marketplace <i>React, Node.js, MongoDB, Chakra UI, WebSockets</i>	2022
• Developed rental marketplace with dynamic product catalog using React.js and MongoDB with responsive design • Implemented real-time inventory updates using WebSockets and optimized MongoDB queries for performance • Built vendor admin interface functionality • Utilized React Router for seamless multi-page navigation and Redux Toolkit for cart and session management	
check-env-sarvesh – NPM Package <i>Node.js, TypeScript, npm Publishing</i>	2024
• Published open-source npm package (npmjs.com/package/check-env-sarvesh) for environment variable validation with TypeScript support	

Education

Government Engineering College	Karnataka, India
<i>Bachelor of Engineering in Computer Science & Engineering</i>	

Key Achievements

- Reduced page load times by 25% and improved database performance by 40% through optimization techniques
- Achieved 70% test coverage with Jest, reducing production bugs by 30%
- Integrated AI chatbot reducing support tickets by 20%
- Maintained 100% on-time delivery rate across all sprint milestones in Agile environment
